
Job Opportunities at Kaman Precision Products, Inc.

Quality Engineer - Requisition # E540

Kaman Precision Products, Inc. has an opening for a quality engineering position requiring 5 -7 years of progressive experience in an aerospace or high technology manufacturing environment.

Work under the general direction of the Quality Manager with a minimum of supervision. Is responsible for the management of moderately complex or single quality assurance engineering programs. Duties and responsibilities include, but are not limited to, the following:

Develop and implement plans to accomplish program objectives that support schedule and meet contract objectives. Work with and interpret blueprints, drawings and mil-specs in accordance with government and/or customer contract requirements. Monitor status of master plan and all related department plans and schedules to ensure milestones are accomplished. Identify problems in the program and assure a plan is developed in coordination with other operating departments for implementing corrective actions. Initiate corrective action, if appropriate.

May recommend manpower requirements to ensure resources are being applied for current and expected work, and to assure on-time delivery of products to the customer. Provide leadership on quality issues concerning both customers and internal programs to assure effective cause, corrective and preventive action; monitor for continued effectiveness. Provide quote or cost estimate information, based on contractual requirements, to support new business proposals.

Participate in program reviews and product cell meetings. Provide recommendations for improved contractual performance. Serve as liaison between customers and management to ensure customer programmatic requirements, cost and schedule are maintained. May be required to develop and present quality and reliability issues/concerns to customers. Assist in the development and presentation of training programs, as needed.

Follow standard departmental and company procedures as outlined by management. Have ability to obtain and maintain appropriate security clearance.

Requirements:

Broad knowledge of a general technical field such as quality assurance or quality engineering. Working knowledge of word processing, spreadsheet and presentation application software as well as various measuring devices and instruments needed. Must be familiar with ISO 9000 regulations. Bachelor's degree in a technical discipline required. 5 to 7 years of experience in an aerospace or high technology manufacturing environment.
